Clothes Drying Locker “KTS 2000 ideal S”

Why heat an entire room in order to dry clothing when a heated locker requires only 1200 watts and dries more efficiently, more gently and at lower cost?

The **OSMA “KTS 2000”**, a two door clothes drying locker, has been specially designed for working and protective clothing which often proves difficult to dry. It can be locked using a cylindrical lock. The rotating disc mounted in the ceiling of the cabinet facilitates the hanging up and taking down of clothing in the 75 cm deep drying locker and speeds up the drying process.

The blowing of warm air into the entire interior of the locker guarantees gentle drying of every type of clothing. The built-in 24h operation timer, the 6h clock timer and the ON/OFF-switch automatically enable individual drying times. The locker includes holders for 8 pairs of shoes or boots.
