

FIREMAN

The ideal mobile unit for internal ventilation and drying of heavy protective clothing

„OSMA Fireman“; the ideal mobile unit for internal ventilation and drying of heavy protective clothing. The efficient internal drying is in high demand by numerous users. The current line of clothes make the user sweat heavily when on duty, and the characteristic odor stays in the jackets, trousers and overalls, thus wearing them becomes rather unpleasant.

The „OSMA Fireman“ is variable, from 3 up to 6 units of clothing (Fireman up to 6 jackets + trousers or up to 6 jackets and no trousers, or up to 6 overalls). The unit is made of high-grade steel, thus durable, easy to clean and therefore very hygienic.
